PORTABLE MOTOR DRIVEN SAMPLER FOR LIQUIDS **EasyProof** – S6L01

➤ **Application :**

This patented motor driven sampler is completely portable and allows the vertical sampling or crossing of layers of liquids, in drums or tanks up to a depth of 4m and 500cps viscosity. Using *EasyProof*, you can obtain representative sampling of incoming raw materials and check also for sedimentation at the bottom of containers. This design meets the sanitary requirements for good sampling practices in the food & pharmaceutical industries.

➤ **Description :**

EasyProof is made up of a peristaltic pump adapted to a removable, stainless steel cylinder with clip allowing easy connection of the probe to a battery powered 12V driver motor with a switch for sampling or reverse for purging (pneumatic optional). The peristaltic pump is fitted with a flexible PVC or SILICONE tubing : it is the only part in contact with the liquid to be sampled and can be rinsed clean or even changed easily.
