# **PickProof**

## **Manual Sampling Spear**

**316 L Stainless Steel spear for microbiological  
sampling of powders and granules**

A Labocontrole Product  
[www.labocontrole.com](http://www.labocontrole.com)

Solid pointed tip to penetrate easily into the sack contents.

The sampling chamber collects the samples...

...which pass directly through the handle into the sample bag or bottle.

**PickProof** enables powders and granulates to be quickly sampled from paper or plastic sacks. Its robust construction and solid pointed tip is made to pierce the sack without causing bending or distortion to the sampler. Its tapered shape enables it to penetrate easily into the sack contents.

The centrally located sampling chamber automatically collects the samples which pass directly and securely through the hollow handle into the sample bag or bottle.

Giving a truly representative sample, the handy **Pick-Proof** can be appreciated when many samples must be collected. This versatile implement is designed to address many of the sampling problems found in the pharmaceutical industry.

**PickProof** is made entirely of electropolished 316L stainless steel and allows for easy cleaning and sterilisation (can be strilised in auto-clave). Manufactured from one piece, there are no edges or undercuts in chich sample material can lodge.

**PickProof** is always delivered with a SS retainer clip for sampling bags and a plastic protective tube.

- Material: 316L/DIN 1.4404 stainless steel
- Total spear length: 410mm
- Sampling depth : 200mm
- Handgrip diameter : 25mm
- Perforation diameter: ca 20mm
- Theoretical volume of the sampling chamber : 50 cc
- Weight of the probe: 200 g
